Power-Up Your Fleet
Electrification

Decarbonisation targets loom large
As the world races to net zero, many fleet operators have set a target for full electrification by 2030, which is just one capital cycle away.

As electrification is a big technology change – and early adopters will win a competitive edge.

Act now to grab the first mover advantage...
...and the benefits that come with an EV fleet

EV transition can be overwhelming
EVs have been on the road for decades, but the world’s electrification is just one capital cycle away. The transition is complex and comes with many challenges:

- How do we deal with the vehicle, charger and infrastructure supply chain crunch?
- How do we manage multiple stakeholders and vendors?
- How do we build the charging infrastructure?
- What vehicles do we need and how do we get them?
- How do we get past the trial phase?

Simplify the complexity with VEV as your partner for the whole transition

VEV provides integrated solutions for fleet electrification and carbon reduction. We offer an end-to-end service for charging, energy generation and management services, backed by energy and fleet management expertise.

EV transition can be overwhelming
