

Smart Energy Management for Green Tourism Buses

Tootbus London know that switching to EVs will achieve their goal to reduce emissions. But a truly sustainable service needs to be holistic and environmentally friendly from end-to-end. To achieve this, they worked with VEV to develop the overall fleet electrification

- VEV enabled Tootbus London to power their existing EVs with 100% renewable energy and is installing 10x chargers plus onsite solar generation* that could power 60,000 KM of bus travel per year.
- Tootbus London will use the VEV-IQ platform to monitor and operate within their current low power capacity.
- VEV is continuing to find ways to optimise and increase Tootbus London's power and charging capacity.

"We had been talking to other potential suppliers, but VEV was a step ahead of everyone else.

They offered a turnkey solution, and most importantly listened to us and understood the pillars of our business."

Gavin Brooking
Managing Director, Tootbus UK

About Tootbus

- The brand Tootbus, owned by RATP Dev, operates sightseeing services in 4 cities across 3 European countries
- Hop-on, hop-off double-decker buses running sightseeing and themed tours, employing 500 employees in the summer season
- Strategic focus on green tourism – 60% of the bus fleet is currently green – and expanding
- Launched the world's first 100% sightseeing green fleet in Brussels in 2021
- A signatory of the Glasgow Declaration for Climate Action in Tourism to support halving emissions by 2030 and achieving net zero by 2050.

Roof-mounted solar panels* will generate **65,000kwh** – which could power **60,000KM** of bus travel.

*subject to planning permission and surveys

VEV supplying **100% renewable power** via a partner and **10x chargers**.

Software management system to manage power supply, charging infrastructure & solar power generation.

Predicted **carbon emissions savings** of **15,567 kg/year**.
